

# Annual Maintenance Service

## Planetary Centrifugal Mixer

During the annual maintenance, we perform all inspections, maintenance work and performance tests according to the manufacturers standard operating procedures. Doing so, we are able to guarantee the correct, safe and in-specification functionality of the equipment.

Our engineers are trained by the experts from THINKY and they can rely on their professional support if required at any time. The engineers do use appropriate tools and original spare parts only.

We provide service, that meets customer needs. Regular maintenance does make sure that the system is running within its specifications and will maximize the service life of your Thinky mixer. In order to meet your expectations in terms of cost or time, you can choose between an on-site service at your facility or an in-house service in our workshop. To minimize the impact of the maintenance activity on customers' business processes we offer a loan unit for the time the system is not available.

Hi-Tec-Support provides service to customers with Thinky mixers across Europe.

## Specification of Services

- Check of operating time, type plate, last reports
- Visual inspection
- Replacement of wear parts
- Thorough cleaning
- Full functional inspection
- Electrical safety test (VDE-Test)
